## **ADVISORY INFORMATION**

**IMPORTANT:** When applying this product under the terms of this Extension of authorisation, comply with any resistance guidance or restrictions stated on the product label.

Total reliance on one pesticide will hasten the development of resistance. Pesticides of different chemical types or alternative control measures should be included in the planned programme. Alternating with different modes of action is a recognised anti-resistance strategy.

This Extension of authorisation relates to the use of 'Thiopron' (M19147) as a fungicide for use against a powdery mildew (*Erysiphe pisi*) in combining pea, vining pea and edible podded pea (mangetout/sugar snaps).

Application must be made via a conventional sprayer with a minimum water volume of 200 l/ha between May (BBCH 79) and September (BBCH 79).
